1. The Restriction requirement mailed 4-10-06 has been vacated because said Restriction requirement is based on the original claims filed 3-9-04 (claims 1-20), however, there is a preliminary amendment filed 7-16-04 which canceled the originally filed claims 1-20 and added claims 21-46. The following new Restriction requirement is based on the newly added claims 21-46.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21-33, drawn to a method of producing a transgenic mouse comprising a vector comprising a 5' gene trap cassette and a 3' gene cassette by introducing said vector into murine embryonic stem cells, classified in classes 435 and 800, subclasses 320.1 and 21, respectively.
- II. Claims 34-46, drawn to a method of producing a transgenic mouse comprising a vector comprising a 3' gene cassette by introducing said vector into murine embryonic stem cells, classified in classes 435 and 800, subclasses 320.1 and 21, respectively.

The inventions are distinct, each from the other because of the following reasons:

Groups I and II are distinct from each other because they are drawn to different scientific considerations: the use of a vector comprising a 5' gene trap cassette and a 3' gene trap cassette to make a transgenic mouse vs. the use of a vector comprising only a 3' gene trap cassette to make a transgenic mouse. A vector comprising a 5' gene trap cassette and a 3' gene trap cassette is different from a vector comprising only a 3' gene trap cassette, and the transgenic mouse produced would differ phenotypically and physiologically. They are materially different methods that differ in method steps, reagents used, dosages and schedules used, response

variables, and criteria of success. The search for group I would require search for group II and vice versa. They require separate searches and the search would not be coextensive. There would be serious burden on examiner to search both groups I and II. Thus, groups I and II are not obvious variants and are patentably distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
